

Reflex Sensor

OTDK502A0091

Part Number

- Adjustable detection range
- Clever inclusive mounting technology
- Large detection range
- Minimal installation space
- Simple installation

The transmitter and receiver in these sensors are located in a single housing. The sensor evaluates transmitted light reflected back from the object. The output is switched as soon as an object passes the selected range. Bright objects reflect more light than dark objects, and can thus be recognized from greater distances.
