ADR-approved, IP6K9K

Description

Tags

Are you looking for a different kind of light distribution? Something regular work lights cannot offer? Do you need quick, large-scale illumination of your working environment? Then opt for the PRO-ROCK II LED work light with a wider beam. The PRO-ROCK II standard version and its mighty 2,000 lumen serves as the basis for this lamp. Again, this lamp stands out through its versatility and ability to operate at anywhere between 12 and 80 volts. The subtle difference is in the specially manufactured lens. Hundreds of light facets hit the lens and refract to create extremely wide and intense close-range illumination.

Specification:

Length (mm)	125
Width (mm)	115
Height (mm)	84.6
