12V - 53 Watt, 24V - 60 Watt

operating temperature -30° - +50°

cable 2,0m / AMP SUPER SEAL

connector / DEUTSCH DT connector

ADR-approved, IP6K9K

Description

Tags

The ROCK series of LED work lights are as bright as any lighthouse and drive away the darkness as reliably and powerfully as cliffs hold back the ocean. The PRO-SUPER-ROCK version consists of 6 high-performance LEDs that generate 3,000 lumen worth of brightness: there are no visibility conditions they can't handle. Despite the flat, compact construction, this lamp with its aluminium injection moulded housing is solid and resistant to wind and weather. An IP6K9K rating puts another tick in the safety column. This light can withstand high-pressure jet cleaning from any angle. Bring on the Siberian frosts and the desert heat: PRO-SUPER-ROCK LED work lights can be used at temperatures ranging from -30° to +50° Celsius. Here's a little tip: the colder the working environment, the better the performance and the longer the lifespan. These work lights are not without their financial benefits as well. A maximum power consumption of just 35 watts means that your vehicle uses less fuel. These lights help you maintain optimum visibility and thus improved safety in the workplace.
